Math 450-001 (CRN 05643)
Complex Variables
3 hrs Credit
Spring 2009
Class Meeting Time: 8:00-9:20 TR TCCW 301
Dr. Spraker Office - TCCW 332
john.spraker@wku.edu http://www.wku.edu/~John.Spraker
Office phone 270.745.6220 Home 270.782.6018
Office hours – TR 9:20-12:45
*Others by appointment or capture
This will be the first introduction many of you have had to the field of complex analysis. It is one of the most basic fields in all of analysis. A tremendous amount of research is currently going on in this area. In addition to this, complex analysis is widely used in applications. Electric circuit theory, boundary value problems such as the Dirichlet, Poisson, Nuemann, and Robin problems, the study of heat flow, potential, and many other topics are examples. For the mathematician complex variables is the foundation on which many other branches of analysis lie. Much of operator theory is based on complex variables for instance.
Like any first course in a subject 450 will be primarily concerned with the mechanics of problem solving. For this reason a lot of homework will be given and some of it will be graded. I tell my students every semester that the most important and most difficult thing about a math course is keeping up. The problems on the exams will be similar to those on the homework so DO YOUR HOMEWORK. Ask questions when they come up, not the day before the test. You need time to fully grasp the answers.
Also, please make use of my office hours. Those hours are your time not mine! I enjoy dealing with students and answering their questions. I never consider a question stupid, no matter how simple the answer may be, as long as the student asking it has made an honest effort to determine the answer.
There will be three tests and a comprehensive final. Your grade will be determined as follows.
Homework - 15%; Each Exam - 20%; Final - 25%. The prerequisite for this course is 327. In addition to this a certain mathematical maturity will be necessary. Every day homework will be assigned. I will not tell you which assignments I will take up do so them
Textbook - Complex Variables and Applications by Churchill and Brown 8th edition. The course will cover most of the first eight chapters of this book as well as a few selected advanced topics if time permits. The following schedule will be adhered to as much as possible.

- Chapter 1 2 days Test I - Thursday, Feb. 26
- Chapter 2 4-5 days Test II - Thursday, April 02
- Chapter 3 3-4 days Test III – Thursday, April 30
- Chapter 4 6 days Final - Friday, May 13, 8:00-10:00
- Chapter 5 4-5 days
- Chapter 6 5-6 days
- Chapter 8 4-5 days
- Chapter 9 and advanced topics 3-5 days
