

Diabetes

Diabetics are more prone to gum disease. If left untreated, gum disease makes it

harder for diabetics to control their blood sugar. When gum disease is eliminated, diabetics improve their blood sugar control and make diabetic complications less likely.

Rheumatoid Arthritis

The causes of gum disease and RA may be related. One doesn't cause the other, but when one is present the other is more likely to be going on. If your gums are inflamed you may be at increased risk for developing RA.

Obesity – Being overweight has been linked with an increased risk for cardiovascular disease, diabetes and gum disease. If you are overweight you should be tested for gum disease, diabetes and cardiovascular disease.

Alzheimer's Disease

Researchers are now investigating the role of gum disease in the development of Alzheimer's Disease.

Special Concerns for Females

Any family history of diabetes? yes no

Do you have a family history of Alzheimer's Disease?
yes no

FEMALES
Tell us if you are or are planning to become pregnant. Gum disease can make it up to eight times more likely that you will have a pre-term, low birth weight baby. You can greatly reduce the likelihood of having an adverse pregnancy outcome by finding out if you have gum disease and then doing whatever is necessary to eliminate it before you get pregnant. It is also important to make sure your gums are inflammation free while you are pregnant.
