Western Kentucky University
Americans with Disabilities Act Amendments Act and Section 508 Policy
Revised: August 2012

Western Kentucky University (WKU) is committed to providing equal accessibility opportunities for all persons with disabilities. Section 504 of the Rehabilitation Act of 1973 and the Americans with Disabilities Act of 1990 established the foundation for equal educational opportunities. Western Kentucky University complied with the mission and spirit of the ADA years before it was codified to become law and has since implemented Section 508 regulations (as amended of 2001), and the Americans with Disabilities Act Amendments Act (ADAAA) of 2008. The purpose of this document is to demonstrate the University’s commitment to providing equal access through reasonable accommodation efforts for qualified students with disabilities. Furthermore, WKU recognizes that equal access for disabled individuals is an ethical course of action for a quality comprehensive university to pursue.

After reviewing this document, the reader will have knowledge to:

1) define and understand basic principles and issues of accessibility as they apply to campus technologies;
2) understand the steps needed to create new, and modify existing, websites, emails, and other electronic communications that provide equal access to information when viewed using typical, industry-standard assistive technologies;
3) guide individuals to campus resources for accessibility and compliance.

Section 1: Legal Requirements

Both State and Federal legislation cover accessibility issues. Applications and Web sites should be assessed for their accessibility to persons with disabilities. Existing and potential needs should be examined to assess resources and operations of an agency or program.

Kentucky
KRS 61.980-988 covers accessibility: Go to the following link and scroll to .980 - .988.
http://162.114.4.13/KRS/061-00/CHAPTER.HTM

National
Postsecondary education institutions are subject to the following provisions:

- Title I <http://ada.ky.gov/employment_title_one.htm> of the American with Disabilities Act as employers;
- Title II <http://www.ada.gov/taman2.html> of the ADA as public educational institutions;
- Title III <http://www.ada.gov/taman3.html> of the ADA as private educational institutions receiving federal monies;
The Federal Rehabilitation Act (1973)
The Rehabilitation Act prohibits discrimination on the basis of disability in programs conducted by federal agencies, receiving federal financial assistance, of federal employment, and that utilize employment practices of federal contractors. Standards for determining employment discrimination under the Rehabilitation Act are the same as those used in Title I of the Americans with Disabilities Act [<http://ada.ky.gov/employment_title_one.htm>].

Section 504 of the Federal Rehabilitation Act (1973)
Section 504 states, "no qualified individual with a disability in the United States (U.S.) shall be excluded from, denied the benefits of, or be subjected to discrimination under" any program or activity that either receives federal financial assistance, or is conducted by any executive agency or the U.S. Postal Service. Each federal agency has its own set of Section 504 regulations that apply to its programs; therefore, agencies that provide federal financial assistance also have Section 504 regulations covering entities that receive federal aid. Section 504 [<http://ada.ky.gov/anti_disc.htm>]

Section 255 of the Telecommunications Act (1996)
The Telecommunications Act of 1996, a comprehensive law overhauling regulations of the telecommunications industry, recognizes the importance of access to telecommunications for people with disabilities in the Information Age. Section 255 of the Act requires telecommunications products and services to be accessible to people with disabilities. Section 508 [<http://www.section508.gov/>]

The Assistive Technology Act (1998)
The Assistive Technology Act was designed "to support programs of grants to States to address the assistive technology needs of individuals with disabilities." In addition, the U.S. Department of Education’s Office for Civil Rights (OCR) questioned the practice of providing personal reader attendants as the primary way of making websites accessible to persons with disabilities. Office for Civil Rights wants to continue to ensure the quality and equality of communication portrayed on websites provided for individuals with and without disabilities is equivalent.

Section 508 of the Federal Rehabilitation Act, As Amended (2001)
Section 508 requires that federal agencies comply with accessibility guidelines when purchasing technology, which also applies to the Web. In response to a 1998 amendment to Section 508, the U.S. Access Board created standards for electronic and information technology that utilizes the World Wide Web Consortium (W3C) guidelines extensively.

Americans with Disabilities Act Amendments Act (2008)
The Americans with Disabilities Act Amendments Act (ADAAA) is designed to ensure public and commercial facilities are accessible to disabled persons, so long as the accommodations are not "structurally impracticable." In 1996, the Department of Justice ruled that ADA requirements apply to Web pages. Title II covers all activities of postsecondary educational institutions whether or not they receive Federal funds. [http://www.usdoj.gov/crt/ada/t2hlt95.htm]
Section 2: Access Issues with Electronic Communications

Defining Disability
According to the ADAAA, a person with a disability is defined as anyone with a physical or mental impairment that substantially limits one or more major life activities. These includes, but are not limited to, concentrating, speaking, performing manual tasks, breathing, hearing, walking, learning, seeing, working, caring for oneself, sleeping, standing, lifting, bending, reading, thinking, and communicating. The definition also includes invisible disabilities such as psychological disabilities, learning disabilities, and chronic health impairments (e.g., attention deficit disorder, epilepsy, diabetes, arthritis, cancer, cardiac problems, and HIV/AIDS).

Defining Accommodation
At the college level, accommodation means providing disabled persons with an equivalent experience that does not represent an undue burden on the University. In the realm of technology, there are several levels of accommodations that can be built into materials or retrofitted (added after materials are created). Building in accommodations is much easier than retrofitting technology.

Western Kentucky University’s Accommodation Policy Explained
Western Kentucky University states its employees will conform to the law in providing accommodations as established by the office of Equal Employment Opportunity/Affirmative Action/University ADA Services (EEO). University resources (e.g., online courses, department webpages, emails) should be designed and delivered in such a way the level of communication and educational outcomes are equivalent for students with or without disabilities. The Kentucky Governor’s Office on Technology is ensuring state websites are accommodating. In spring 2004, the Kentucky Virtual University worked with WKU to affirm that online courses were accommodating at Priority 1 of the W3C.

Implications for Accommodation with Technology
Face-to-face courses are typically adapted when a student with a disability arrives in class. Although one can wait to make an accommodation until an incident occurs, given the challenge and vast amount of time involved in retrofitting a course or website, it is much easier to build it in or begin retrofitting before the instructor is faced with a short term deadline. For example, a course relying on video may have to create transcripts of all videos at a pace equivalent for how other students are managing the course. A website using Portable Document Format files may need to provide a HyperText Markup Language or Text version. Those using JavaScript, or even intensely using images, may have to provide a text-only version.

Materials Covered by the ADAAA
Anything required for a student to complete a course or officially interact with the University (e.g., registration) or for employees to complete their work, should be evaluated for potential accommodations. For example, this could include websites not based on the WKU server.
Another Reason for Accommodation
Basic accommodations for the most common disabilities are also standard design principles for
universal access, and provide a clear description in text of any image or tables for maximum
understanding. For effective communication, design for universal accessibility.

Technology and Accommodation
All audio, video, multimedia and text components of courses and electronic communication
should be evaluated for accessibility. Some technologies that may require accommodation:

- Emails
- PDAs or mobile devices
- Interactive online forms
- Satellites
- Instructional televisions
- Telephones
- Webpages
- Chats/Instant messaging
- Discussion boards
- Instructional or general (e.g., Microsoft Office Word, Excel) software
- CD-ROMs
- DVDs
- Laser discs
- Video and audio tapes
- Electronic texts
- Print materials

Where access to websites, not controlled by the University, is required or necessary for
completion of a course or other University business, WKU should take steps to ensure such sites
are accessible or provide the same material by other means.

Be aware that all of these technologies may also provide an accommodation solution for some
types of disabilities.

Ensuring Reasonable Accommodation
Accommodation depends on the particular student, the task that must be accomplished, and the
technology available. Since technology changes over time, including assistive technology, the
general trend is for it to be easier to accommodate assuming good design is built in from the
start. Technology alone cannot solve the problem because many accommodations are conceptual
(e.g., describing an image, laying out navigation for someone who cannot see, avoiding
numerous animated gifs that distract a person with ADHD). The recommended strategy is to
provide built-in accommodations for industry-standard assistive computer technology.

Choosing Technologies for Accommodation
When a new technology or software is adopted, or a classroom or lab is constructed, potential
accommodation issues need to be considered. This means being familiar with at least the most
common disabilities (see the Defining Disability section).
Factors to consider when choosing technologies are: (a) the nature of the learning task, (b) what it will take to maintain the accommodation, and (c) whether the task is necessary to accomplish the goal(s).

Existing procedures for adoption of technologies should be modified to include a step in which accommodation is considered. For example, the course approval process should include a statement about considerations for accommodation.

**Section 3: Compliance Process for ADAAA and Section 508**

A disclaimer, such as the one listed below, will be added to all WKU compliant web pages which are necessary for institutional business:

“This website is in compliance with Section 508 and W3C Priority I guidelines 1.0. If you find it to be inaccessible, please contact ada.compliance@wku.edu [mailto:ada.compliance@wku.edu] [with the URL of the specific page and contact information].”

To comply with the University’s process for reporting and responding to complaint issues, a complainant can utilize the link in the above disclaimer to send an email to the EEO office and include their contact information, the URL of the page in question, and a brief explanation of the problem(s) they are experiencing. If/When the EEO Director determines a complainant is certified as disabled, an ADAAA taskforce shall be established to determine the validity of the complaint and proper response. The taskforce should be composed of changing membership based on the complaint (e.g., supervisor from the non-compliant webpage unit, a representative from the EEO office, others at the discretion of the EEO Director).

Western Kentucky University shall develop, offer, and maintain training programs for faculty, staff, and students responsible for publishing webpages through implementation of the following training mechanisms:

a. Faculty
   - An ADAAA Section 508 website and online course;
   - ADAAA Section 508 training incorporated into WKU’s Course Management System training;
   - “Stand alone” training sessions offered yearly, at a minimum, for new faculty;
   - “Stand alone” training sessions offered yearly, at a minimum, to update continuing faculty.

b. Staff
   - An ADAAA Section 508 website and online course;
   - “Stand alone” training sessions offered yearly, at a minimum, for new staff;
   - “Stand alone” training sessions offered yearly, at a minimum, to update continuing staff.

c. Students
   - ADAAA Section 508 awareness and training within appropriate curricula.

Western Kentucky University ensures accessibility of online learning through ADAAA training modules provided by the Department of Information Technology (IT), the Faculty Center for Excellence in Teaching, and the Division of Extended Learning and Outreach (DELO). The IT helpdesk employees assist faculty, staff, and students with appropriate resources compliant with WKU’s policy on accessibility. The Student Accessibility Resource Center also works closely...
with the IT helpdesk and DELO to respond to distance learning students who have problems accessing online content (e.g., coursework documents, videos, tests created by professors).

Section 4: Resources for Accessibility and Compliance

Campus Information Resources

Policy Compliance or Grievance Issues

Section 508 Rehabilitation Act

Western Kentucky University is committed to ensuring its websites are accessible to the widest possible audience. We are continually improving accessibility by following all recommended guidelines outlined in Section 508 of the Rehabilitation Act Amendments of 1998. If you are experiencing difficulty accessing any element of this web site, please let us know the nature of the problem and the section where the difficulty was encountered. We will do our best to provide you with the information you require.

Appendices

Web Pages and Emails

The Web Accessibility Initiative (WAI) guidelines are summarized in the below three priorities:

Priority 1
These guidelines **must be followed** to assure minimal accessibility compliance with Section 508 otherwise one or more groups of users will find it impossible to access Web content. WKU electronic communications will meet Priority 1 of the WAI guidelines.

Priority 2
These guidelines **should be followed** to improve access to Web content otherwise one or more groups of users will find it difficult to access.

Priority 3
These guidelines **may be followed** to make it easier for most users to access Web content.

The compliance priority checkpoints (1, 2, and 3) and checklists, listed below, are to be used for web pages and emails, and should be applied to other types of electronic communications (both new and previously created). Specific situations may call for measures not covered in the checklists; however, following the checklists should indicate a good faith effort, but may not guarantee ADAAA compliance.

Priority 1 Checkpoints
These guidelines **must be followed** to assure accessibility compliance with Section 508 otherwise one or more groups of users will find it impossible to access Web content.

<table>
<thead>
<tr>
<th>In General</th>
<th>Yes</th>
<th>No</th>
<th>N/A</th>
</tr>

</tr>
</tbody>
</table>
12.4 Associate labels explicitly with their controls.

If you use applets and scripts

Yes No N/A

6.4 For scripts and applets, ensure that event handlers are input device-independent.

7.3 Until user agents allow users to freeze moving content, avoid movement in pages.

8.1 Make programmatic elements such as scripts and applets directly accessible or compatible with assistive technologies [Priority 1 if functionality is important and not presented elsewhere, otherwise Priority 2.]

9.2 Ensure that any element that has its own interface can be operated in a device-independent manner.

9.3 For scripts, specify logical event handlers rather than device-dependent event handlers.

Priority 3 Checkpoints

These guidelines may be followed to make it easier for most users to access Web content.

In General

4.2 Specify the expansion of each abbreviation or acronym in a document where it first occurs.

4.3 Identify the primary natural language of a document.

9.4 Create a logical tab order through links, form controls, and objects.

9.5 Provide keyboard shortcuts to important links (including those in client-side image maps), form controls, and groups of form controls.

10.5 Until user agents (including assistive technologies) render adjacent links distinctly, include non-link, printable characters (surrounded by spaces) between adjacent links.

11.3 Provide information so that users may receive documents according to their preferences (e.g., language, content type, etc.)

13.5 Provide navigation bars to highlight and give access to the navigation mechanism.

13.6 Group related links, identify the group (for user agents), and, until user agents do so, provide a way to bypass the group.

13.7 If search functions are provided, enable different types of searches for different skill levels and preferences.

13.8 Place distinguishing information at the beginning of headings, paragraphs, lists, etc.

13.9 Provide information about document collections (i.e., documents comprising multiple pages.).

13.10 Provide means to skip over multi-line ASCII art.

14.2 Supplement text with graphic or auditory presentations where they will facilitate comprehension of the page.

14.3 Create a style of presentation that is consistent across pages.
