The good news is effective health promotion programs can help reduce falls. The bad news, adherence and retention are typically less than 50% because older adults believe exercise programs are painful and not very much fun. To address this problem, Dr. Jason Crandall created Bingocize®, a socially engaging group-based program that combines exercise, health education, and the widely popular game of bingo. Our research team successfully tested Bingocize® and found over 90% of older adults were retained over the course of the 10-week program. PLUS they significantly improved physical, social, and mental health. Bingocize® is delivered live by a trained lay leader either face-to-face or using the Bingocize® web-based app.</p>
