

Western Kentucky University Stormwater Utility Survey 2017

C. Warren Campbell
Randel Dymond
Kandace Key
Amanda Dritschel

Cover

The cover flood picture is of Lower Antelope Canyon near Page Arizona. During heavy thunderstorms the canyon fills completely. On August 12, 1997 a flash flood here killed 11 hikers.

Preface to the 2017 Survey

I want to thank Georgia Tech professor Dr. Randy Dymond and his Masters students Kandace Kea and Amanda Dritschel who revised the database and produced 2 Masters theses and two journal papers using this data. Of course, any mistakes in this document or database are mine.

This past year, I spent some time looking at who is using this data. I was surprised to find that at least 29 universities had cited the survey including 2 in Canada and one at the University of Cape Town, South Africa. On the Internet there are numerous citations by Federal, state, and local government agencies and companies working to create stormwater utilities for communities. It is gratifying that such a diverse audience is using this report.

I also want to thank the many people, too numerous to name individually, who have contacted me with updated fees, new stormwater utilities, and other useful information. Keeping up to date on more than 1600 stormwater utilities is a major task and it could not be done without your help.

With the formation of a stormwater utility in Ithaca, New York there are now 40 states with stormwater utilities. I am aware of efforts to form stormwater utilities in 3 other states. Stormwater utilities are gaining popularity because of the close relationship between services rendered and the fee amount. An example I use to explain the fairness of SWUs is that you can build a 100 story building on a 5 acre parcel at a cost approaching \$1B. You can build a 5 acre parking lot for a few hundred thousand dollars. They both produce the same runoff, but if you use an addition to the property tax to fund stormwater services, the building owners may be paying 1000 times that of the parking lot owners.

Warren Campbell
Bowling Green, Kentucky
August 9, 2017

Methods

The main goal of this survey is to identify as many U.S. Stormwater Utilities (SWUs) as possible. Because many stormwater professionals do not have the time to respond to questionnaires, our primary method of identification was Internet searches. We searched on key terms such as “stormwater utility”, “stormwater fee”, and “drainage fee”. We scoured on-line municipal codes such as Municode, AmLegal, Sterling, LexisNexis, and others. We searched through many city web sites trying to find utilities. We have also had many people contact me to update fees and identify new utilities. However, the data primarily comes from Internet sources and is prone to errors. We hope the readers of this document will continue to help us correct them. This year our Virginia Tech team also phoned several cities to find missing data and we believe their scrub of the data has improved our quality control. However, it is difficult to keep up with fee changes in more than 1600 utilities, so if you discover errors in our data please contact me at warren.campbellwku.edu.

ACKNOWLEDGEMENTS

The author is grateful to Professor Randel Dymond and his graduate students Kandace Kea and Amanda Dritschel for work they did on past surveys and the database. Their contribution to this survey has been invaluable.

Since 2007, the majority of the SWUs in this survey were identified by our undergraduate students who are listed below. I am very proud of the fact that 52 of my students have passed the CFM exam. When I came to Kentucky in 2004, I was the 7th CFM in the state. There are 11 states with fewer than 52 CFMs so we are making a contribution to floodplain management. Students contributing to the 2014 and 2016 surveys were:

Kain Kotoucek, CFM
Cory Smith, CFM
Megan Jones, CFM

Students contributing to the 2013 Survey were:

Jordon Begley
Walker Bruns
Clayton Cook
Aaron Dockery
Gabriel Goncalves de Godoy
Chris Heil
Eathan Johnson
Carson Joyce
Zach Neihof
Ashley Penrod
Tyler Sweetland
Kirk Thomas
Dylan Ward
Rory Watson, CFM
Doug Woodson, CFM

Students participating in the 2012 survey were:

Benjamin Bell, CFM
Jeremy Brown, CFM
Will Spaulding, CFM
Justin Wallace, CFM

Contributors from previous years were:

Daniel Douglas
Allison Gee
Emily Kinslow, CFM
Lacie Lawson
Kendall McClenny, CFM

Kory McDonald
Daniel Skees, CFM
Brian Vincent, CFM
Jason Walker
Russ Whatley, CFM
Alex Krumenacher, CFM
Nick Lawhon, CFM
Austin Shields, CFM
Adam Disselkamp, CFM

Jeremy Rodgers, CFM
Matt Stone, CFM
Kyle Turpin, CFM
Kal Vencill, CFM

The author is grateful to all of these students who have participated in the survey over the past years. They have worked diligently at a somewhat tedious job, but one that should have taught them something about stormwater financing, municipal codes, and websites.

We are also indebted to AMEC for sharing their list of stormwater utilities with us. In 2008, Scott Embry had the foresight to ask them for it and they obliged. We continue to have a good relationship with AMEC.

I also wish to thank the Environmental Finance Center of the University of North Carolina which provided data on several North Carolina and Georgia stormwater utilities (Environmental Finance Center, 2013).

Several companies publish municipal and county codes which serve as a source for much of our data. We are particularly indebted to the Municipal Code Corporation, American Legal Publishing Corporation, Lexis Nexis, and Sterling Codifiers, Inc.

Almost all of our data for Canadian SWUs came from from Mike Gregory, Senior Water Resources Engineer for AECOM in Kitchener, Ontario. Thank you, Mike.

Introduction

We have been able to identify almost 1639 stormwater utilities nationwide and 22 in Canada. There are now 6 states with 100 or more stormwater utilities (SWUs). Forty states and DC have at least one SWU. Figure 1 shows U.S. stormwater utilities by location.

As Figure 2 shows, one of the very disappointing aspects of the SWU map is that Louisiana and Mississippi have missed a golden opportunity to encourage stormwater utilities. Twelve years after Hurricane Katrina, neither of the hardest hit states has formed a SWU as far as we can tell. Also, two of the states hardest hit by Hurricane Sandy (NJ and CT) have a stormwater utility that we could identify. We know that New York has its first stormwater utility in Ithaca. Hopefully this will lead to more SWUs there. I am also aware that New Orleans is in the early stages of considering a stormwater utility. Also, Anchorage, Alaska has let a contract to develop a stormwater utility. If these come to fruition, we will have 2 more states with SWUs.

One community official said, “We are too small to have a stormwater utility.” The smallest community with a stormwater utility that we have found is Indian Creek Village, Florida with a 2010 census population of 88 (no, this is not a misprint). The largest community is Los Angeles with a population exceeding 3,000,000. The average SWU community population is about 70,300 and the median is 18,400. No community is too small nor too large to have a stormwater utility.

At some point, this survey will become unnecessary as every community will have some appropriate stormwater funding mechanism. When will this occur? We have identified 1639 SWUs in the U.S. and 22 in Canada, and as this is written 22,285 communities participate in the National Flood Insurance Program (NFIP) (FEMA’s Community Status Book: <https://www.fema.gov/cis/nation.pdf>). This survey will be necessary for some years to come.

The Data

Part of our raw data is contained in the Table in Appendix A. As this is written, our survey contains data on 1639 stormwater utilities (SWUs) located in 40 states and the District of Columbia (Figure 1). Based on our current find rate, my best guess would be that there are between 1800 and 2000 SWUs in the U.S. More are being formed all the time and we are aware of several that will form within the next few months. Figure 2 shows the number of stormwater utilities by state. At least 6 states have more than 100 SWUs.

Nationwide, the average monthly single family residential fee was \$5.18, the standard deviation was \$5.72, and the median fee was \$4.00. Most fees go up over time reflecting an increase in the Consumer Price Index (CPI). Some communities actually tie the monthly fee to the CPI. However, several communities have reduced their fees. The quartile fees are: 25% - \$2.84, 50% - \$4.00, and 75% - \$6.00 for an interquartile range of \$3.16.

Fees ranged from zero up to \$69.25 per month. Figure 3 shows the spatial distribution of monthly fees. As has been observed in previous surveys, no state has all high fees. Even states with the higher fees also have utilities with much lower fees. The range of fee amounts probably reflects stormwater needs and local political realities.

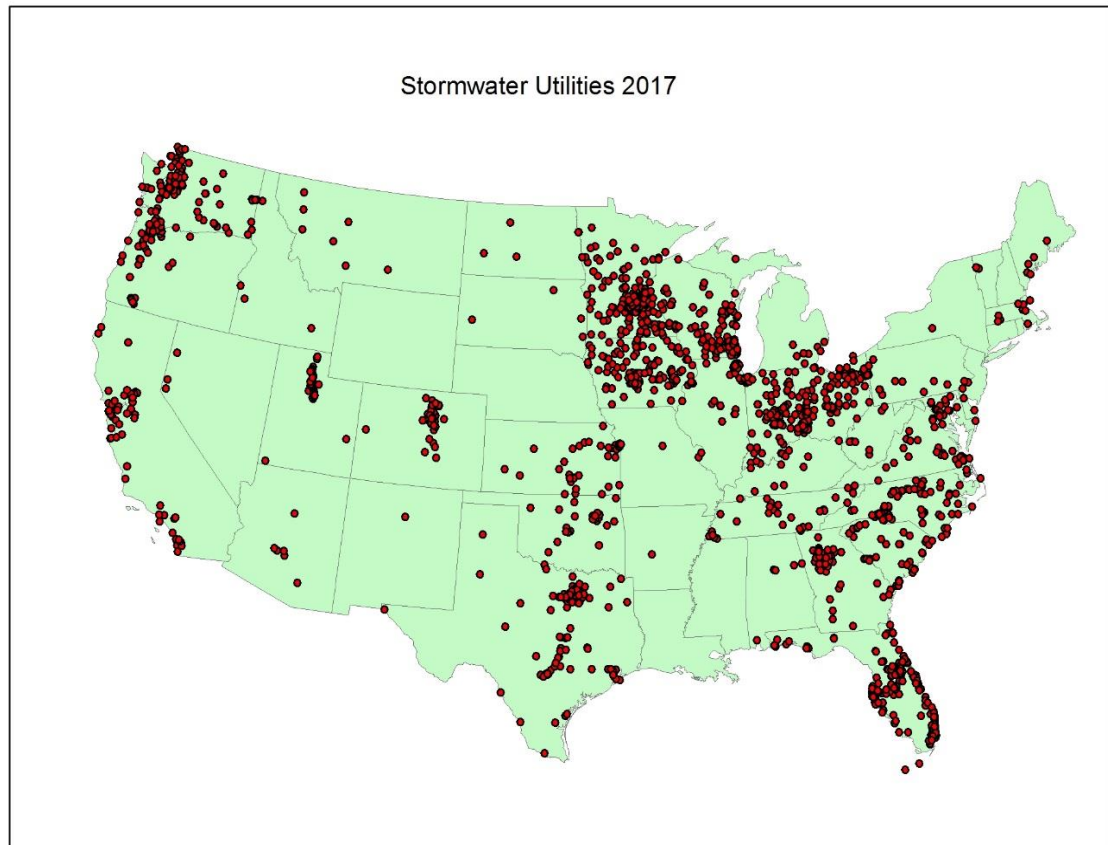

Figure 1. U.S. stormwater utilities (SWUs)

The most widely used method of funding is the ERU system. An Equivalent Residential Unit is usually the average impervious area on a single family residential parcel, although some communities define it as the average of all residential parcels. Fees for non-residential properties are proportional to the ratio of the parcel impervious area to the ERU. For the ERUs identified in our survey, the median was 2900 square feet impervious with a standard deviation of 8900 square feet. We were able to find ERUs for 766 utilities (Figure 4). It is important to have a good estimate of the ERU because an inaccurate ERU means that someone is paying a disproportionate amount which could increase legal exposure (Campbell [2010]). The second and third most popular fee systems were the tier fee (236 SWUs) and the flat fee (233 SWUs) systems. Next in popularity was the Residential Equivalent Factor (REF) system with 139 identified. We were able to identify 106 Dual Fee systems.

Figure 4 shows the spatial distribution of community ERUs. The chart includes communities that did not calculate a real ERU, that is, the average impervious area of residential properties. Usually most parcels in a community are residential parcels and these may all have a single fee or may be divided into a few tiers. This simplifies the administration of the utility.

As with the fees, there is no discernible spatial pattern of ERUs. Presumably, larger ERUs imply more affluent areas or residential parcels with larger homes. However, this may not always be the case. An ERU that is larger than the actual average single family impervious area means that non-residential

properties will pay less than their fair share of the SWU annual revenue and residential customers will pay more (Campbell [2010]).

Figure 2. Number of stormwater utilities by state

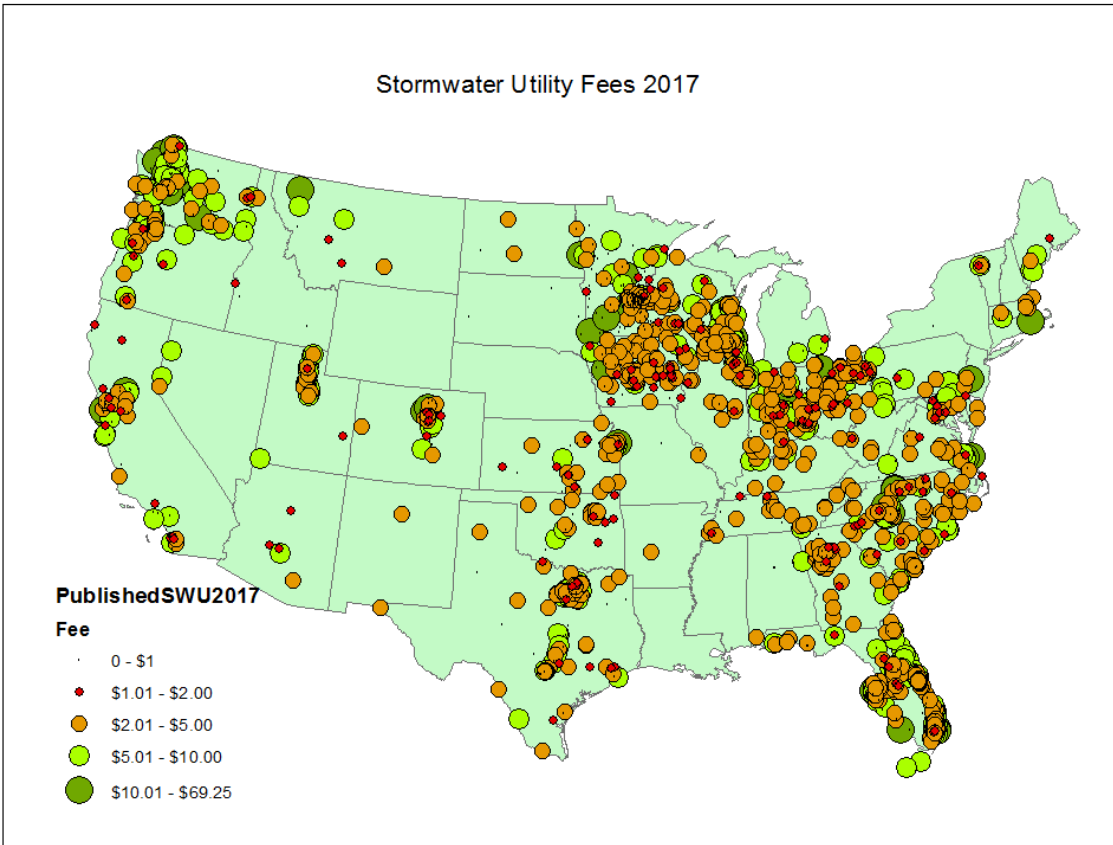

Figure 3. Spatial distribution of monthly stormwater fees

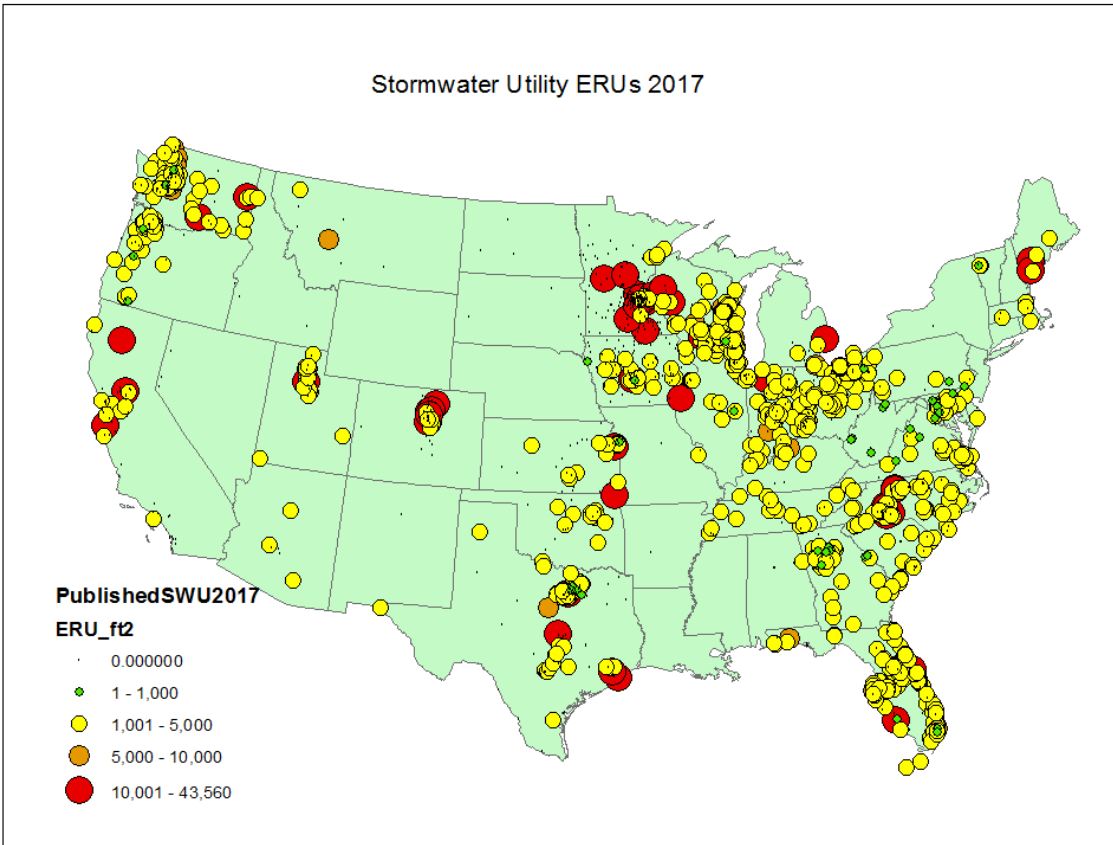

Figure 4. Equivalent Residential Units (ERUs)

Canadian Stormwater Utilities

We found 22 Canadian communities with stormwater utilities. From Figure 5, there appears to be some cross-border communication especially in British Columbia/Washington and in Ontario/Michigan/Ohio/Indiana. Of the 22 SWUs we were able to find 3 that used an ERU fee system. In Canada the most popular system is the tier system and we were able to identify 8 of those.

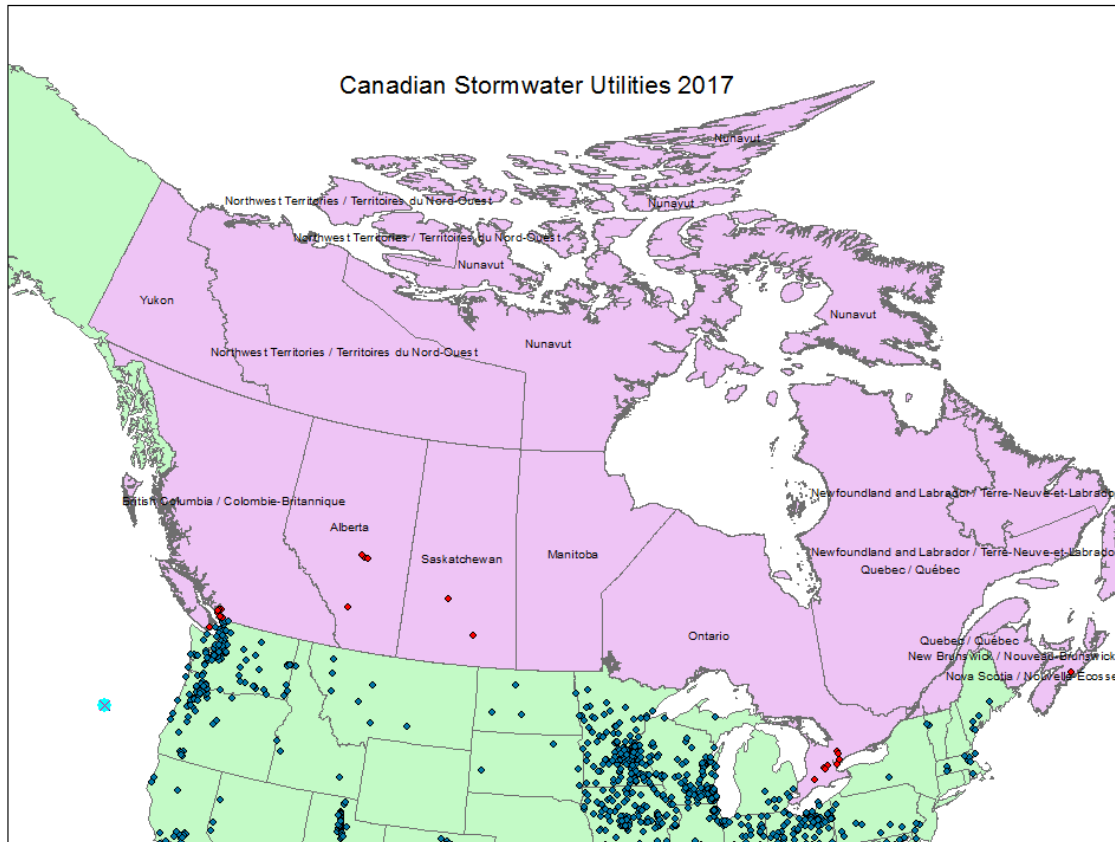

Figure 5. Canadian communities with stormwater utilities.

Appendix A. Raw Data Tables

The following data tables provide the information collected on 1639 U.S. stormwater utilities and 22 Canadian ones. Note that ERUs in the Canadian SWUs are in square meters impervious. The key for the fee types is given below.

Code	Meaning
E	ERU
F	Fixed Rate
T	Tier System
R	Residential Equivalence Factor (or similar)
D	Two Level System (Residential/Commercial)
X	No information
S	Fee per Parcel Square Footage
A	Fee per Parcel Acre
-	Repealed
M	Water Meter
W	By Water Usage
V	Existence of SWU/ Fee verified
IA	Fee per Square Foot Impervious Area
