

A Mirror or a 2-Way Glass?

How can you tell when you are in a room, restroom, motel etc. with a mirror or a 2-way glass? Here's how: I thought it was quite interesting! And I know in about 30 seconds you're going to do what I did and find the nearest mirror.

Just conduct this simple test: Place the tip of your fingernail against the reflective surface and if there is a GAP between your fingernail and the image of the nail, then it is GENUINE mirror. However, if your fingernail DIRECTLY TOUCHES the image of your nail, then

BEWARE! IT IS A 2-WAY MIRROR!

REMEMBER. No Space, Leave the Place

If the fingernail test works in a dressing room, the chances are good that it's a 2-way mirror.

However, today's mirrors are made differently and the fingernail test isn't necessarily a very good one. People who can afford the more expensive mirrors may use one where the reflective glazing is applied differently. These 2-way mirrors are not hung on walls as an ordinary mirror is. They are set into walls (or doors) as windows are. In other words, if there's a wall behind the mirror, the mirror is almost certainly an ordinary one.

IF you feel uncomfortable when checking a mirror when traveling, don't hesitate to ask for a different room.
